Capturing Long-Term Growth Through Disruptive Innovation

Rooted in over 40 years of experience, we aim to identify long-term investment opportunities resulting from technological innovations such as robotics, artificial intelligence, energy storage, DNA sequencing, and blockchain technology. By focusing solely on disruptive innovation, we believe we can deliver long-term capital appreciation and performance with low correlation to traditional investment strategies.

ARK researches and invests in a broad global universe that spans all countries and market capitalizations to identify companies that we believe will be the leaders, enablers, and beneficiaries of innovation. ARK's Open Research Ecosystem is designed to capitalize on rapid change through the convergence of internal and external insights, combining top-down and bottom-up research.

ARK sizes the opportunity of innovation, and then evaluates companies we believe are best positioned to benefit. An iterative investment process and active management of high-conviction portfolios allow ARK to capitalize on rapid change, and to avoid industries and companies likely to be displaced by advances in technology.

ARK's Investment Strategies

ARK manages and sub advises a number of global public equity portfolios across a variety of investment vehicles. ARK's products include a suite of exchange traded funds (ETFs), mutual funds, and managed accounts all focused solely on disruptive innovation. Each strategy seeks investment opportunities that offer growth over 3-5 years that we believe the market ignores or underestimates.
