## **ARK Investment Management Is Hiring:** **Genomics Associate**

### Who We Are:

ARK is a global investment manager focused solely on investing in disruptive innovation that is changing the way the world works. Majority Owner, Catherine D. Wood, founded ARK in 2014 on the belief that innovation is key to growth. Rooted in over 40 years of experience, ARK aims to identify large-scale investment opportunities in the public markets resulting from technological innovations centered around genome sequencing, robotics, artificial intelligence, energy storage, and blockchain technology.

ARK manages and sub advises long-only global public equity portfolios across a variety of investment vehicles, including a suite of exchange traded funds (ETFs), mutual funds, and separately managed accounts. Our investments are backed by an open research ecosystem designed to identify innovations with the potential for long-term growth.

As of December 31, 2020, the firm managed approximately \$58.2 billion assets.

ARK is committed to ensuring equal employment opportunities for all employees and strives to maintain an environment free of discrimination based on race, color, religion, gender, national origin, ancestry, age, disability, genetic information, military or veteran status, marital status, sexual orientation, gender identity, citizenship, or any other protected category or characteristics as defined by federal, state or local laws. If you want to learn more, visit our [“Philosophy”](#) page to understand how ARK differs from traditional investment firms. We also encourage you to meet the [ARK team](#) and follow us on twitter.

### What You Will Do:

We expect you to perform high quality work to support our Genomics strategies. You will conduct original research on innovative technologies, while providing coverage of companies in your research area. As a key member of ARK’s research team, you will leverage your knowledge of the life sciences to keep us at the forefront of the molecular age of medicine. Your work will directly inform our investment decisions, so your success is our success.

### Associate Responsibilities:

- Support ARK’s portfolios by combining top-down thematic research and bottom-up fundamental analysis to identify investment opportunities
- Work closely with ARK’s Genomics Analysts to identify innovative technologies, model the growth rates and sizes of new markets, estimate unit economics, and assess the competitive landscape
- Research and identify public companies that are the leaders, enablers, and beneficiaries of disruptive innovation

- Form investment recommendations based on your research to share with ARK's Genomics Analysts and Portfolio Manager
- Attend conferences and actively engage in our research ecosystem to field insight from a variety of subject matter experts
- Actively gather feedback on your work through Twitter and other online platforms

### Who You Are:

- You're a technological optimist. You believe in the power of technology to create a better future for humanity. You want to play a role in realizing and supporting that future.
- You have a background in the life sciences and an insatiable desire to learn more. While you don't need to be a walking encyclopedia, comfortability with any of the following subject matter areas is preferred: cell biology, biochemistry, evolutionary biology, genetics, biomaterials, systems biology, applied mathematics and statistics, cancer biology, pharmacology, or gene editing.
- You're driven by your innate curiosity. You likely found ARK because your interests and ours converged. Since you follow the industry as closely as we do, you're already quite knowledgeable about one or more of the technologies we cover.
- You enjoy quantitative analysis—collecting data, transforming it, and using it as the backbone of your forecasts. You don't have to be a finance wizard, just a willingness to learn on the fly.
- You're a fabulous storyteller. You combine quantitative analysis, historical analogies, and cultural and user-centric considerations to form compelling narratives of how companies and technologies could evolve. Your writing would not look out of place on Wired or The Information.
- You're an independent thinker. You probably diverge from the mainstream, but you aren't merely contrarian. You are interested only in finding the truth. Your strong conviction is balanced by a healthy dose of humility.
- You're not just an analyst, you're a builder. You want to find ways to scale ARK as a company, guide its culture, and push us in new directions we've not yet considered.
- **BONUS:** You have decent programming or data science chops. You can use scripting languages and analytics tools to scrape, analyze, visualize, and communicate data.
- If this description doesn't fit you but you have something unique to offer, **please apply anyway.**

### How to Apply

The best way for us to get to know you is through examples of your work. This may be a blog, presentation, podcast, newsletter, or tweetstorm. If you don't have an example of your work, we'd encourage you to create one.
